ach and vomiting in consequence. Whether this effect was owing to a peculiar quality of the leaves, or merely to the large amount of a crude, resinous substance taken into the stomach at once, admits of some doubt. At any rate, if the plant be of a deleterious nature, the quantity requisite to produce ill consequences is greater than any person will probably be in much danger of taking at a time.

PODOPHYLLUM PELTATUM.

Dr. Burgon, in the Medical Recorder, gives the following account of the medical operation of this plant. "The powdered root," says he, "is extensively employed as a cathartic in bilious complaints, and I am persuaded with as much success as jalap. I have often prescribed it, combined with calomel in the proportion of twenty grains of the former to eight or ten of the latter, and have uniformly been pleased with its effects on my patients. In this dose it is extremely prompt and efficacious. My experience enables me to state, that it is more drastic than jalap, and of course occasions more active catharsis, more severe griping, and makes a

more permanent impression on the system. Its operation, in all cases in which I have administered it, is slower than that of jalap, but it leaves the bowels longer in a lax and soluble condition. I once took twenty grains at four o'clock P. M. which gave me no disturbance till next morning, when its operation commenced and produced continual motions all that day and part of the next night together with severe tornina; this was the first dose of Podophyllum I had ever administered; and its effects being so decided, I have since prescribed it in a multitude of cases, and for the most part with similar results. Like most other drastic cathartics it is rendered milder by combining it with calomel, and hence, in most cases, this combination is to be preferred to giving it alone. It is more disagreeable to the stomach than common purgatives, and will oftener occasion emesis. In bilious affections it usually supercedes the necessity of an emetic previous to a cathartic, and hence two desirable effects are produced by one agent.

I was employed one afternoon in a close room in powdering the Rad. podophylli, which, by the next morning, occasioned a most violent inflammation of my right eye and eyelid; it yielded, however, to the antiphlogistic regimen in eight or ten days.
